```java
public class Empty {}

public class Main
{
    public static void main(String[] args)
    {
        Empty e=new Empty();

        //This method returns the object of type Class.
        System.out.println(e.getClass());

        //This method returns a hash code value for this object.
        System.out.println(e.hashCode());

        //This method returns if the objects are equal or not.
        System.out.println(e.equals(e));

        //This method returns a string representation of the object.
        System.out.println(e.toString());

    }
}
```
